¹ For the air that passes through the filter. Purification performance parameters are tested under specific third-party laboratory conditions with specific dust particles and formaldehyde gas as target pollutants. Overall particle reduction depends on many factors including the amount of air processed, the pollutant type and the pollutant introduction rate into the environment.

³ Guangdong Detection Center of Microbiology. Report No. 2020FMO4294601E, March 15, 2020. Results: Escherichia Coli: 99.99%, Staphylococcus Aureus: 99.99%, Candida Albicans: 99.99%. The UV LED is effective inside the Air Purifier.

⁴ 3D circulation airflow is divided into two modes, including Front Airflow and Upwards Airflow. Usually, various types of dirt appear at different positions between the ceiling and the floor in the room, and they can be purified by different modes of 3D airflow respectively. Front Airflow mode cleans up house dust spreading within 30cm above the floor, while Upwards airflow removes odor floating in the air.
